

OOTK 21ST CENTURY – 5TH (AND FINAL) OPERATION– THE TREE OF LIFE

5TH OPERATION – TREE OF LIFE

Shuffle the deck. Cut the deck into 10 Piles by dealing the cards out as follows;

	1	
3		2
5		4
	6	
8		7
	9	
	10	

11th card would go in Pile 1 and the 12th in Pile 2 and so on until the whole deck is dealt into these 10 piles.

These piles represent the 10 Sephirots of the Tree of Life. Once you've dealt the deck into these 10 piles, flip the packs over and consider the top cards as they pertain to the Sephirot they are in. Then **WITHOUT DISTURBING THE ORDER OF THE CARDS** go through each pile until you've located the Significator. The pile containing the significator is the Pile that you will read.

The Sephirot in which the Significator appears will determine the final outcome of the question and will color the meaning of the cards within the pile.

Count and pair the cards as before.

MY SHOCKING SUGGESTION: If you're not familiar with or interested in The Tree of Life you can substitute and use the meanings of the Numbers 1-10 instead of the meaning of the Sephirots.

Since there are 78 cards in a deck – Piles 1-8 will contain 10 cards each and Piles 9-10 will contain 9 cards each. So if your Significator appears in Piles 1-8 you will have a single card left over from the pairing. If it appears in Piles 9-10 the pairing will come out even. The single card left over from Piles 1-8 and the card to the left in the last pair of Piles 9-10 will be the one that gives the final inclination as to time-frame for the information uncovered through the counting and pairing to come into play.
